1. Document Version

Version	Date	Description	
4.0	20/01/2023	-New route v2.	
		-In the passive-invoices, query string fields correction.	
4.1	20/03/2023	-Added examples of a zip file response.	
5.0	11/05/2023	-New route v3.	
		-In the passive-invoices, added phase1, phase2, and	
		top fields to the query string.	
		-In the passive-invoices, enriched the response	
		payload with sdild, dataRicezione and fileName.	
		Furthermore, it is possible to provide values for both	
		ReceiverPIVA and ReceiverCF.	
		-New methods: set-fase-1, clear-fase-1, set-fase-2 and	
		clear-fase-2.	
5.1	18/05/2023	-Used the camelCase convention for resource names.	
		-Minor corrections to the document.	
6.0	19/06/2023	-New route v4.	
		-In the jobs/{jobId} is added fileType "FU" for unsigned	
		invoice.	
		-Used <route> in call description.</route>	

2. Introduction

IMPORTANT: Before using the Web Service calls, contact assistance for the environment configuration.

The Web Service Easy Tracking exposes an interface for downloading the invoices received from SDI on the platform.

Exposed calls:

- The request for a list of passive invoices to download based on certain parameters. It is possible to use the phase 1 field (and/or phase 2) to download only "new" invoices if, after downloading an invoice, you use the set-fase-1 (and/or set-fase-2) method.
- Booking (job) for downloading n passive invoices, where n ranges from 1 to 100.
- Download of invoices contained within a job.

Authentication of the calls: Calls must be authenticated according to the OAuth standard through the request of a JWT token and its inclusion as a Bearer token in the header of all calls.

Definition of constants:

The <baseUrl> varies depending on the environments:

VarHub NG production (Empoli) = https://servizi.varhub.it

VarHub NG staging (Empoli) = https://servizitest.varhub.it

Ditech production (Bologna) = https://servizi.intermediario.ditechonline.it

Ditech staging (Bologna) = https://servizi.intermediariotest.ditechonline.it

The <authBaseUrl> varies depending on the environments:

VarHub NG production (Empoli) = https://isentry.varhub.it

VarHub NG staging (Empoli) = https://isentrytest.varhub.it

Ditech production (Bologna) = https://isentry.intermediario.ditechonline.it

Ditech staging (Bologna) = https://isentry.intermediariotest.ditechonline.it

<route> = v4

3. Authentication

T	
Web Service to Call	<authbaseurl>/api/Token/AccessToken</authbaseurl>
Http Method	POST
Headers	Content-Type: application/json
	Accept: application/json
Response Status	Status Code: 200 - OK
	Status Code: 401 - Unauthorized
Payload Request	{ "apiName": "openBusiness.scope.serviziweb.api", "clientName": "openBusiness.client.serviziweb.api", "clientSecret": "uKNtPmq49yjLkaYv", "password": " <password>", "username": "<username>" }</username></password>
Payload Response	In case of 200: " <token>"</token>
Notes	<username>: username assigned to the client.</username>
	<pre><password>: password assigned to the client.</password></pre>
	<token>: JWT token encoded in base64.</token>
	The response payload is a string that starts and ends with
	double quotation marks (") enclosing the actual token itself.

4. List of Passive Invoices

Web Service to	shood lab looi/sacutes /Devialeed	musicas/passius inusiass?

                            "total": 3
                          In case of 400:
                          {
                             "message": <errore>
                          <id>: unique code (integer) identifier of the invoice to be used in
Notes
                          the booking download request.
                          <errore>: explanatory string of the error generated by the
                          request.
                          In the Request:
                          - The date range cannot exceed 31 days. Only one type of date
                          range can be specified, either document date or received date.
                          - It is possible to provide a value for either VAT Number (PIVA)
                          or fiscal code (CF), or neither of them, or both
                          - if phase1 and/or phase2, the allowed date range extends to
                          365 days.
                          If Top is not specified, it is assumed to be equal to 100000.
```

5. Download Booking

Web Service to Call	<baseurl>/api/<route>/DownloadInvoices/jobs</route></baseurl>		
Http Method	POST		
Headers	Authorization: Bearer <token></token>		
	Content-Type: application/json		
	Accept: application/json		
Response Status	Status Code: 202 - Accepted		
	Status Code: 400 - Bad Request		
	Status Code: 401 - Unauthorized		
	Status Code: 403 - Forbidden		
Payload Request	List of document ids, max 100		
	{		
	"doclds": [id1, id2,, id100]		
Payload Response	In case of 202:		
	{		
	"jobld": <jobld></jobld>		
	}		
	In case of 400:		
	\{		
	"message": <errore></errore>		
	}		
Notes	<jobld>: 36-character string (GUID) that should be used in job</jobld>		
	status requests.		
	Once the job is created, it has a validity of 24 hours. After that, it will be deleted even if not downloaded.		
	<pre><errore>: explanatory string of the error generated by the</errore></pre>		
	request.		

Response Status

HTTP 202 (Accepted): job in progress HTTP 400 (Bad Request): invalid input data HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): one or more document ids not found or for which the user does not have

6. Download

Web Service to Call	<baseurl>/api/<route>/DownloadInvoices/jobs/{jobId}</route></baseurl>
Http Method	GET
Headers	Authorization: Bearer <token></token>
	Content-Type: application/json
	Accept: application/json
Response Status	Status Code: 200 - OK
	Status Code: 202 - Accepted
	Status Code: 400 - Bad Request
	Status Code: 401 - Unauthorized
	Status Code: 403 - Forbidden
Payload Request	
Payload Response	File Zip
Notes	

Response Status

HTTP 202 (Accepted): job in progress

HTTP 400 (Bad Request): invalid input data (invalid GUID)

HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): GUID not found or for which the user does not have permissions

HTTP 200 (OK): The response contains a zip file with the invoice files and an indice json file. The job will be reset after the response. To be able to download it again, a new job must be created. Il payload di The response payload is a binary file with the content type application/octet-stream.

The indice.json file contains the list of invoices inside the zip file, indicating for each the id, the fileName and the fileType.

The fileType can have the following values:

- "FA": original invoice received from SDI (xml or p7m)

- "MT": SDI metadata - "FU": unsigned invoice

7. Set Phase 1

Web Service to Call	<baseurl>/api/<route>/PassiveInvoices/set-fase-1</route></baseurl>
Http Method	POST
Headers	Authorization: Bearer <token> Content-Type: application/json Accept: application/json</token>
Response Status	Status Code: 200 - OK Status Code: 400 - Bad Request Status Code: 401 - Unauthorized Status Code: 403 - Forbidden
Payload Request	List of document ids, max 100 { "doclds": [id1, id2,, id100] }
Payload Response	In case of 400: { "message": <errore> }</errore>
Notes	

Response Status

HTTP 200 (OK): operation executed

HTTP 400 (Bad Request): invalid data input HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): one or more document ids not found or for which the user does not have

8. Clear Phase 1

Web Service to Call	<baseurl>/api/<route>/PassiveInvoices/clear-fase-1</route></baseurl>
Http Method	POST
Headers	Authorization: Bearer <token> Content-Type: application/json Accept: application/json</token>
Response Status	Status Code: 200 - OK Status Code: 400 - Bad Request Status Code: 401 - Unauthorized Status Code: 403 - Forbidden
Payload Request	List of document ids, max 100 { "doclds": [id1, id2,, id100] }
Payload Response	In case of 400: { "message": <errore> }</errore>
Notes	

Response Status

HTTP 200 (OK): operation executed

HTTP 400 (Bad Request): invalid data input HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): one or more document ids not found or for which the user does not have

9. Set Phase 2

Web Service to Call	<baseurl>/api/<route>/PassiveInvoices/set-fase-2</route></baseurl>
Http Method	POST
Headers	Authorization: Bearer <token></token>
	Content-Type: application/json
	Accept: application/json
Response Status	Status Code: 200 - OK
	Status Code: 400 - Bad Request
	Status Code: 401 - Unauthorized
	Status Code: 403 - Forbidden
Payload Request	List of document ids, max 100
	\
	"doclds": [id1, id2,, id100]
]}
Payload Response	In case of 400:
	\
	"message": <errore></errore>
	}
Notes	

Response Status

HTTP 200 (OK): operation executed

HTTP 400 (Bad Request): invalid data input HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): one or more document ids not found or for which the user does not have

10. Clear Phase 2

Web Service to Call	<baseurl>/api/<route>/PassiveInvoices/clear-fase-2</route></baseurl>
Http Method	POST
Headers	Authorization: Bearer <token> Content-Type: application/json Accept: application/json</token>
Response Status	Status Code: 200 - OK Status Code: 400 - Bad Request Status Code: 401 - Unauthorized Status Code: 403 - Forbidden
Payload Request	List of document ids, max 100 { "doclds": [id1, id2,, id100] }
Payload Response	In case of 400: { "message": <errore> }</errore>
Notes	

Response Status

HTTP 200 (OK): operation executed

HTTP 400 (Bad Request): invalid data input HTTP 401 (Unauthorized): invalid token

HTTP 403 (Forbidden): one or more document ids not found or for which the user does not have
